Expanding Horizons By Building Bridges Across Borders

This momentum-driven phase marked an exciting chapter of growth and new opportunities. From entering fresh markets to sharing knowledge across continents, we've been uniting innovators, organizations, and ideas, laying strong bridges that are shaping the global AI ecosystem.

Connecting the World Through AI Innovation

Innovation has no boundaries, and neither do we. Our efforts this quarter brought us closer to a connected future where AI drives transformation, accelerates growth, and unlocks opportunities worldwide.

Ciaran's Visit

We were privileged to host Ciaran at our Ahmedabad headquarters for a productive business visit focused on strengthening collaboration and aligning strategic goals. Key discussions centered on designing customer experiences powered by conversational AI, advancing product innovations to make AI more accessible, and identifying new opportunities across industries and global markets.

The visit marked a significant step in reinforcing our shared vision for innovation-driven growth and fostering stronger global partnerships rooted in trust and long-term collaboration.

Taking Vision 2030 Forward Our Riyadh Visit

As part of our global growth strategy, our team traveled to Riyadh to align with Saudi Arabia's Vision 2030 and connect with key leaders driving digital transformation. We engaged with stakeholders across **Education, Government, Finance, Retail,** and **Tourism**, including Aljasser Holding, VIOPO Group, Franchise Go 2025, and Dan (a PIF company).

The visit offered insights into how technology, creativity, and sustainability are converging in the region, highlighting our role as a partner in driving AI-powered innovation.

Empowering Innovators with Sahara Ventures, CRDB in Tanzania & South Africa

In the recent span of innovation, our Tanzania visit connected us with innovators, partners, and clients, gaining on-the-ground insights into how technology is shaping growth.

In collaboration with Sahara Ventures, we led a masterclass on purposeful technology and engaged in powerful conversations with founders navigating resource gaps with creativity and resilience.

We also interacted with CRDB Insurance, part of CRDB Bank, to explore the future of insurance, from pay-as-you-drive to weather-based crop coverage and micro-insurance models, highlighting technology's role in financial inclusion.

The visit concluded with a live project review, giving us a first-hand perspective on system impact, usability, and opportunities to elevate performance.

Trending Technologies

The digital landscape is evolving rapidly, and every quarter brings us closer to a smarter, safer, and more connected future. Two standout innovations are leading the charge: AI that is more human than ever and passwordless security solutions that simplify our digital lives.

🤖 **Agentic AI: The Future with You at the Center**

AI that goes beyond responding; it understands, learns, and acts. Agentic AI doesn't just follow commands; it proactively assists, anticipates needs, and aligns with human intent. Imagine AI that books flights before you search, organizes meetings around your priorities, or recommends smarter financial decisions based on real-time data.

From intelligent business assistants to adaptive learning platforms and personalized shopping experiences, Agentic AI bridges automation and empathy, transforming technology into a collaborative, human-centric partner. By delivering contextual insights and anticipating actions, it makes every interaction smarter, faster, and more intuitive.

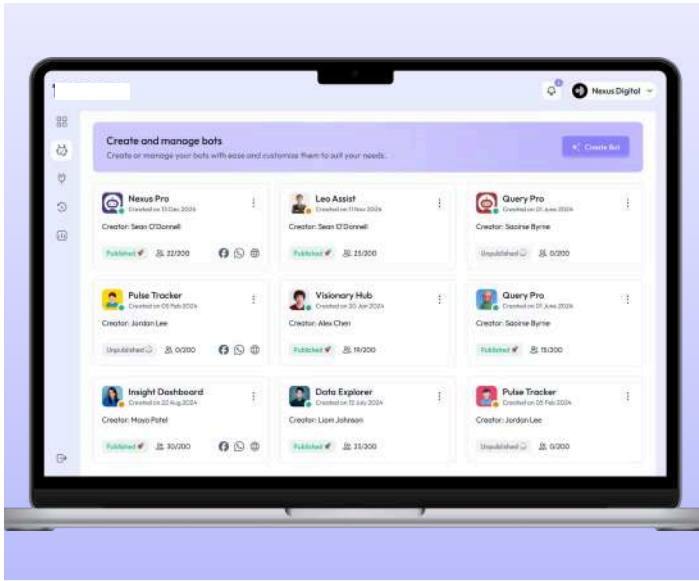

🔒 **Goodbye Passwords, Hello Freedom!**

Passwordless authentication is here, fast, secure, and effortless. Face scans, fingerprints, and one-tap OTPs simplify access while eliminating the risks of phishing, credential theft, and password reuse.

For enterprises, it provides enhanced security, regulatory compliance, and reduced IT overhead, while users enjoy seamless, frictionless access across apps, platforms, and devices. From banking and e-commerce to enterprise dashboards, identity is now the key, instant, secure, and personalized.

Driving Impact Through Scalable Solutions

At the core of every innovation is tangible business impact. Our solutions, from enterprise AI to automation tools, are built to scale effortlessly, adapting to the evolving needs of growing businesses and industries.

Meet Our Conversational AI Model Making Chats Simple

Easily build, train, and manage chatbots with enterprise-grade security, customization, and scalability. Deployed across the web, WhatsApp, Slack, or Teams, while aligning each bot with your brand, delivering smarter, more engaging conversations.

- Design AI agents that reflect your brand voice and personality with intuitive, no-code setup options.
- Feed your bot FAQs and PDFs or connect it directly to Google Drive and Microsoft 365 knowledge bases for dynamic learning.
- Gain complete visibility with interactive dashboards, conversation analytics, and exportable reports to optimize performance.
- Deploy confidently using Docker, Kubernetes, and secure cloud infrastructure with multi-region redundancy.
- Communicate fluently across languages and platforms, maintaining a consistent experience everywhere.

With advanced LLM integration, sentiment analysis, and context retention, our Conversational AI isn't just smart; it's strategic, transforming every chat into a meaningful connection.

Enhancing Bowling Coaching with AI-Powered Video Analysis

Bowling coaching relied on visual observation, lacking precision, progress tracking, and efficient data management. We built a next-gen platform that brings AI-powered video analysis to bowling coaching.

- AI tracks posture, release angle, arm alignment, and spin efficiency frame-by-frame for precise technique evaluation.
- Easily upload videos, compare sessions side by side, and visualize improvement trends with intuitive graphs.
- Get instant, actionable feedback after each delivery to accelerate skill development and consistency.
- Securely manage player data, maintain reports, and streamline admin tasks through encrypted cloud storage and access controls.
- Built on AI vision models and microservice architecture, ensuring high-speed processing and scalability for academies of any size.

With AI precision meeting athletic intuition, the platform empowers coaches to focus on strategy while technology handles the analysis, making training smarter, faster, and measurable like never before.

Team Spirit in Action

Our achievements are powered by people, and this quarter, we celebrated them in style. Let's cheer, celebrate, and recognize the people and passions that keep our culture alive.

- 🏆 **Cheers to the Champions: Awards & Recognitions:** We honoured outstanding individuals and teams whose dedication, creativity, and excellence continue to inspire our collective success.
- 🇮🇳 **United in Tricolour on Independence Day 2025:** The celebration reflected our unity, pride, and diversity through a vibrant colour trio and shared moments of togetherness.
- 🏏 **Stronger Together, On and Off the Pitch:** Our Box Cricket Tournament brought colleagues together in a spirit of teamwork and fun, turning every match into a memory and every cheer into stronger bonds.
- 🎪 **Tech Dandiya 3.0, Navratri with a Tech Twist:** In collaboration with Ahmedabad's top seven tech companies, we celebrated a night of tradition, technology, and teamwork that truly showcased innovation in motion.

On The Clean Slate

This quarter was about global impact, innovation, and celebration. The next chapter promises new technologies, partnerships, achievements, and bigger goals. Let's stay bold, curious, and ready because the best stories are still ahead. Until next quarter, keep believing in what's next.
